

Knowage 6.1.0 CE - Release Notes

From the previous version 6.0.0 the following changes have been made:

- New cockpit features and general improvements. In the new cockpit it is possible, for example:
 - to move a widget from tab to tab,
 - to manage the look&feel,
 - a new table widget with more options
 - a new filter section on widget
 - the selector widget has more style options
- New Real Time features on NGSi Data Set
- General improvements on Report Engine

Bux Fixing: solved the following issues of Knowage tracker:

KNOW-27	The installer did not create the foodmart_demo database
KNOW-32	Impossible to set programmatically a host URL different from localhost
KNOW-22	Exporting charts error
KNOW-21	Dashboard Export XLS/XLSX malformed for Crosstab
KNOW-20	Data set cannot connect to widget
KNOW-18	Export chart to PDF or XLS
KNOW-17	can not display "data source" when creating a cockpit thru a local browser accessing remote Knowage Server
KNOW-16	LOV: can't use strings delimited by apostrophe in Groovy script
KNOW-25	The installation stops responding
KNOW-12	Error to "show sub totals" in CrossTab Widget
KNOW-8	OLAP DESIGNER: Images are not loaded when I edit a template created with designer
KNOW-9	SVG Graphic Not Working
KNOW-6	Tables on the Dataset wizard dialog (panel) display only 3 rows per page
KNOW-5	It is not possible to cross navigate from a document that is displayed as a popup window
KNOW-4	Missing message for Qbe dataset edit button on workspace
